

TAI BUI

Denver, CO | taib9642@gmail.com | linkedin.com/in/tai-bui9 | tbaioim.github.io/portfolio

PROFESSIONAL SUMMARY

Software engineer with production web development experience and a Master of Science in Computer Science (December 2026). Maintains a portfolio of 170+ client websites alongside one other developer, and has cut average build time from 90 hours to under 30 by designing internal tooling and the team's first continuous integration and deployment (CI/CD) automation. Deep learning background in PyTorch supporting AI-adjacent product work. Seeking Software Engineer roles beginning January 2027.

SKILLS

Languages: JavaScript, Python, PHP, C++, SQL, HTML/CSS

Frameworks & Libraries: React, WordPress, PyTorch, TensorFlow, Scikit-learn

Tools & Platforms: Git, GitHub Actions, CI/CD, Amazon Web Services (AWS), Linux; working exposure to Docker, TypeScript, and REST APIs

WORK EXPERIENCE

Web Developer — EOS Healthcare Marketing

March 2026 – Present

- Build and maintain 170+ production websites for healthcare practices as one of two developers on a shared JavaScript, PHP, and WordPress codebase; deliver new builds and own ongoing debugging and security updates across the portfolio.
- Reduce average website build time from 90 hours to under 30, a 65% reduction, by designing reusable baseline theme automation and local build tooling now adopted as the team's standard workflow.
- Automate local-to-staging deployments and uptime monitoring in GitHub Actions — the team's first CI/CD pipeline — with alerting that automatically files an issue when a site goes down.
- Own features end to end from requirements through release, collaborating directly with designers and stakeholders and resolving client-reported issues across concurrent engagements.

Teaching Assistant, Algorithms — University of Colorado Denver

January 2024 – May 2024

- Taught sorting, graph algorithms, and complexity analysis to a class of 30 students through weekly office hours and one-on-one tutoring.
- Graded assignments and delivered written feedback; students attending regular tutoring showed measurable exam improvement.

PROJECTS

Multimodal Disease Subtyping (TCGA-BRCA) — Team of 4

January 2026 – May 2026

Python, PyTorch, variational autoencoders, Scikit-learn

- Owned the RNA sequencing variational autoencoder (VAE) in a 4-person team, reaching 0.63 accuracy against a 0.58 multilayer perceptron baseline, and coordinated integration and code review in Git.
- Benchmarked 4 multimodal fusion strategies against unimodal baselines and established that none surpassed the clinical-only model at 0.68 accuracy, tracing the cause to weak cross-modal latent alignment and identifying majority-class collapse that headline accuracy had masked.

Health Insurance Policy Assistant

January 2026 – May 2026

Python, LLaMA 3.1, LlamaIndex, FAISS

- Built a Retrieval-Augmented Generation (RAG) assistant that orchestrates subagents to retrieve and compare plan coverage details, grounding responses in retrieved source records to prevent hallucinated answers.

CERTIFICATIONS

AWS Certified Cloud Practitioner | NVIDIA: Building Transformer-Based Natural Language Processing (NLP) Applications | Software Engineering Certificate, University of Colorado Denver

EDUCATION

Master of Science, Computer Science — University of Colorado Denver

Expected December 2026

Coursework: Machine Learning, Deep Learning, Generative AI, Big Data Science, Advanced Computer Architecture

Bachelor of Arts, Computer Science (Biology Minor) — University of Colorado Denver

May 2024

GPA: 3.87 / 4.00 · Coursework: Data Structures, Algorithms, Software Engineering, Database Systems, Operating Systems
